Practical Economy

Baking powders made from alum or phosphate may be bought for a trifle less than Royal Baking Powder, which is made from cream of tartar, derived from grapes.

Alum powders are not only cheap, but they differ greatly in leavening power.

If a cheap baking powder is used for a fine cake and the cake turns out a failure there is a waste of costly materials worth more than a whole can of the cheap baking powder.

Royal Baking Powder produces the finest food, and its use therefore, results in an actual saving.

B. V. S. VARNISH

For woodwork, floors and outside surfaces, does not scratch or mar white. Heavy pieces of furniture moved across the floor merely dent the finish, but it will not crack or show white streaks. The floors will not have to be refinished so often if done with B. V. S. Varnish. Drop in and get one of our Test Paddles, finished with B. V. S. Varnish; it is a sound argument on varnish values which speaks volumes.
